DriWater, Inc. Develops Partnerships in Hong Kong and Southern China

Santa Rosa, CA – March 1, 2010 – DriWater, Inc. is pleased to announce it has signed an exclusive distribution agreement to work with Toyo Greenland of Hong Kong and Southern China through the Berkeley, CA agency, Obien Corporation.

"I saw DriWater at an erosion control conference and thought DriWater products would be ideal to enhance the environmental projects being done by Toyo Greenland in the region", notes Daniel Ho of Toyo Greenland.

In December 2009, DriWater President and CEO Joe Paternoster and Andrew Chan of Obien made a visit to Hong Kong and the GuangDong region of Southern China to develop the relationships, visit environmental sites, and to attend an international trade show.

In Hong Kong the schedule focused on time with Daniel Ho and visiting some of their projects in which DriWater will play a key role. Since Hong Kong's forests have been largely eliminated for development, there's a tremendous need for reforestation. Another challenge is that in the many city streets of Hong Kong, trees are installed in medians and city center areas without irrigation. A common practice is for workers to block off lanes to hand water, causing safety hazards and accidents on these busy streets.

For the numerous erosion control projects in Hong Kong, DriWater will soon assist in replanting. Currently there are several projects in which steep eroded hillsides are stabilized by anchoring cyclone fencing to the hill, spraying soil into the fence, planting native trees and vegetation, then hydroseeding on top. The challenge is in providing the successful irrigation this native vegetation requires to be successfully established on such steep slopes.

Then at the 2009 International Plants Expo in FoShan City, Joe Paternoster was invited to highlight DriWater technology in a presentation to conference attendees. A DriWater booth was at the show in conjunction with DriWater and Toyo Greenland, staffed by both Toyo's GuangDong and Hong Kong staff.

As part of its mission, DriWater is committed to providing high quality water conserving products for worldwide irrigation applications. Since its beginnings, DriWater has had a strong commitment to global reforestation.
